

## Phase 8 — Conclusion

### Project Conclusion

The **Employee Raise Issue — Record Producer & Service Portal Integration** project successfully delivers a **centralized, user-friendly, and structured self-service solution** that enables employees to raise workplace-related issues through the ServiceNow Service Portal.

The implementation integrates the **Employee Center scoped application, custom Employee Raise Issue table, UI Policies, field dependencies, Record Producer, custom Service Portal widgets, and dedicated Service Portal** into a single end-to-end solution.

The solution provides the following key benefits:

- **Standardized and accurate issue submission** through structured forms and predefined fields.
- **Business-rule enforcement** through UI Policies and form-level restrictions.
- **Controlled category and subcategory selection** using field dependencies.
- **Seamless integration between the Service Portal and backend custom table.**
- **Improved issue visibility and tracking** through structured issue records.
- **Reduced manual effort** for HR and support teams.
- **Reduced data inconsistencies** by enforcing standardized information capture.
- **Improved employee experience** through an easy-to-use self-service interface.
- **Centralized issue management** within the ServiceNow platform.

The **end-to-end testing and validation** performed in Phase 7 confirmed that the major components of the application function as expected, including the Service Portal, custom widgets, Record Producer, field mappings, UI Policies, and field dependencies.

Overall, the implementation provides a scalable foundation for managing employee workplace issues and can be further enhanced with features such as **automated assignment, notifications, SLA management, approval workflows, reporting, dashboards, and advanced business rules.**

### Final Outcome:

The project transforms an informal, email-based employee issue-raising process into a **standardized ServiceNow self-service workflow**, improving data quality, process efficiency, issue visibility, and the overall employee experience.
